

# **MOUNTING STRUCTURES FOR ELECTRONICS COMPONENTS**

## **ABSTRACT OF THE DISCLOSURE**

Mounting structures for facilitating fast and easy installation and/or removal of  
5 electronics components into or out of a computer system are disclosed. The mounting  
structures include a base and a stackable mounting structure. Each mounting structure  
generally includes generally parallel and opposing spacers, tapered supports extending  
from the spacers to engage holes defined on a surface of an electronics component, and a  
base portion extending between being generally orthogonal to the spacers. The spacers  
10 may define orifices to facilitate securing the mounting structure and the electronics  
component to an electronics base via, e.g., a hook and loop material. The stackable  
mounting structure may include sharp points and angled legs to also engage the  
electronics component below.
